BSI as ISP #4

Client #1: BSI hosts a Web site, an FTP site and provides DNS to Barcroft Human Power Vehicles

Date: Wed, 25 Jun 2003 12:56:46 -0400
To: Bill Cook <william.j.cook@cox.net>
From: Paul Wagner <wagner@ai.mit.edu>
Subject: Re: Fwd: BARCROFTCYCLES.COM is due to expire

Bill,

Yes, for Web hosting, Barcroft HPV has paid up through May 2002.
To settle up through June 2003, the 13 latest months amount to
13 months x $20/month = $260.00

If you could write a check to Beyond Systems, Inc. for $260.00,
then we'd be current again.

My mailing address is still:

1837 R Street, NW
Washington, DC 20009

Thanks! Best wishes...

FYI, it looks like you'll need to renew your registration of the barcroftcycles.com domain name in the next few weeks. (See below.)

Hope all is well. You have a great Web site!

-- Paul
cell: ###-###-####

Thank you. I've renewed. Do I owe you some money?

Ben's just back from a month in Vietnam and India. You probably know he's now CEO of Solar Electric Light Co.

best, bill

Client #2: Last year BSI hosted a Web site, an FTP site and provided DNS and wireless Internet access to Young Woman's Christian Home

Prior to February 2003, Beyond Systems built and hosted a simple Web site for the YWCH. In February 2003, Beyond Systems turned over control of the Web site to Akesha Horton, a friend, young Web developer and YWCH resident.

In addition, Beyond Systems provided wireless Internet access to YWCH.

PDF created with pdfFactory trial version www.pdffactory.com

Okay, Akesha, you should be able to modify the ywch.org domain name now, as Mrs. L and I can. Just log into www.joker.com and then click on Domain - Renewal. You should see ywch.org listed there.

The domain references my DNS server, which tells the world on which computer WWW.ywch.org runs. Once you know what the Web server's IP address will be, let me know and I will update the DNS settings.

Cheers,
Paul

I am writing in respect to the domain name you set up for TMH.
I was wondering if you have a username and password at joker.com for the domain name. I need it to update the account and access account information.

Hi Akesha,

Glad you're setting up a Web site for TMH! I believe each person (Owner, Admin, Tech, Billing) needs their own account on Joker.com.

I just now created accounts for "**ywchtm@aol.com**" and "**Akesha1@aol.com**". You both should receive emails within 24 hours with temporary passwords from Joker.

Right now ywchtm@aol.com is the only other email address (besides mine) allowed to access the domain "ywch.org". For you to gain access to it, you'll need to log into your account and create a contact for yourself -- i.e., provide your email address, mailing address, etc. I created a contact for Mrs. L earlier, when I created the domain name.

Once you have a contact on Joker, I can add your email address to the list of authorized users.

Please let me know if you DO NOT receive an email from Joker today sometime.

At your convenience you can provide me or Mrs. L. with the information and also advise on who you use for web hosting.

PDF created with pdfFactory trial version www.pdffactory.com

I use phpwebhosting.com

Thanks,
Akesha

Beyond Systems hosts its own Web sites, in order to conduct "advanced" (aka "experimental") things. phpwebhosting looks good. I have also heard of http://www.ipowerweb.com (basic package at $7.95/month). Not sure how good it is...

Good luck!

Paul

Hi Lori,

No problem -- I will be by TMH again tonight at around 9:30pm. I will inquire about the laptop and a spare PC card at that time and set them up.

With a range extender antenna the new resident should have a good or probably excellent signal. I could check that tonight as well.

BTW, an alternative arrangement for residents needing a range extender antenna might be to use the wireless Ethernet Converter along with the antenna (like what the printer and PC have in the computer room) instead of a wireless PC card. The slight advantage of this approach is that some people may find it easier to unplug an ethernet cable from a laptop on a daily basis than to eject the wireless PC card. A slight disadvantage is that the equipment costs a bit more (and it does require a working ethernet port or PC card on

PDF created with pdfFactory trial version www.pdffactory.com

the laptop).

It is unfortunate that the antenna's connector is not durable enough
to let it be removed and inserted on a daily basis. We are looking
for one with a different design.

My tally of recently ordered components looks as follows...

From a previous week:
1 wireless PC card client
1 range extender antenna
-1 USB extension cable (wasn't needed, so I.O.U. $10)

Yesterday:
2 wireless PC card clients
2 wireless USB clients (1 of these I installed on Tiffany Zinter's PC)
1 range extender antenna

Soon I will try to put together a second invoice to cover these new items.

Have a nice weekend!

-- Paul

Paul,

Thanks for coming by last night and for the extra inventory.

This morning I had another request for DSL service from a resident who moved
in last night. Wouldn't you know, just after you were here! She has a
Windows 2000 laptop and will leave it in the office for installation whenever
you can make it this way again.

PDF created with pdfFactory trial version www.pdffactory.com

She is in room 119, which is in the far corner like the library. Do you think this is going to present a signal problem?

Talk to you soon.

Lori Lisiecki

Hi Paul,

We have three new residents who want to subscribe:
Leslie Scheuermann Rm. 223 Win laptop
Helen King Rm. 324 Win laptop
Susan Matthees Rm. 225 don't know yet.

We will also have a bunch of new people moving in over the weekend, so there may be a couple more from that group who will sign up. Frankly, I'm surprised that residents here just for the summer are interested. I really expected it to be used solely by the longer term residents.

Anyway, we should have enough equipment for these three, and as usual, you can just let me know when you want to come, and I'll notify the residents.

Thank you.

Lori

Hi Lori,

Okay, I finished installing network and printer drivers for the laptops
of the first two residents below. The third (Susan, with a Mac PowerBook)
had a Zip drive in the bay where I needed a CD drive. We were unable to
reach her, so I can try again next visit (at a date TBD).

One thing -- if I recall correctly, I still haven't billed TMH for the 4 silver wireless
PC cards I purchased several weeks ago. (I believe I initially supplied two
of my own PC cards, and then ordered two replacements, plus two additional
for TMH per your request.) If you recall that too, then I'll forward you an invoice
for 4 PC cards.

BTW, how is your workstation behaving these days? I remember you saying
it used to lock up overnight...

Hi Paul,

I understand that Susan is going to get her cd drive sent to her from home so
you can complete the installation on her system.

My records show that we have paid for 14 pc cards. Frankly I have lost track
of how many you have delivered, so whatever you recall is probably accurate.
I will try to keep better records.

PDF created with pdfFactory trial version www.pdffactory.com

My system has been behaving much better. I have only found it locked up once since you made the last adjustment, so whatever you did worked.

Thanks for your help.

Lori

Hi Paul,

Two more new subscribers on deck:

1. Erin Dilts Rm. 104S Windows laptop
2. Kelly Koss Rm. 102N Windows laptop.

Again, I'll leave it to you to let me know when you will come by.

Thanks.

Hi Lori,

I can come in this Thursday afternoon to do those installs.

I realize now that I do the same basic install procedure nearly every time. (Every so often there is an issue which requires more expertise.) If Kelly is around then, I could give him improved written instructions and walk through the steps with him. That would give TMH added capability in house. Naturally I'd be available for tough cases. Just a thought.

I could arrive at 3:30pm on Thursday if Kelly is free then...

Cheers,
Paul

Lori,

All 4 installs went fine (including Katherine Cook's).
I left a 5th PC Card on your desk. (I gave a TMH
resident the 1st one last week, and the new residents
the 2nd, 3rd and 4th ones this evening.)

Have a good weekend,
Paul

Lori,

That is good news, indeed. It's been a good couple of weeks, so I would declare the problem fixed.

The printer problem is interesting; I wonder what has changed. I would power-cycle the printer first, then the print server (little beige [gray?] unit on the floor), and then the smaller white Ethernet Convert (to which the antenna plugs in). Also, insure that the antenna is still plugged in to it, and is placed outside the doorway of the computer room.

You've probably tried those things already; if it still prints slowly, please let me know. I can drop by early next week.

Have a nice weekend!

I wanted to let you know that the new router has solved our downtime problem. It has been up continuously since you installed it. Please bill me for the hardware.

Secondly, we have developed a printer problem. It is printing too slowly and not completing pages. Kelly describes it as not receiving the signal fast enough. Any ideas what we should do to correct this?

All the joy of the season to you.

Lori

Hi Lori,

Sorry about the trouble. I am in El Salvador at the moment, back this coming Saturday night.

Kelly might try uninstalling the Orinoco Client Manager software, as well as the Orinoco driver, to confirm that the machine is still as the resident says it was originally. Installing those items should not damage the PC or cause it to boot up in Safe Mode. (I'd guess the machine already had some problems.)

With the second PC -- and I'm not sure what operating system it has -- he should make sure it is in a location where the signal is known to be strong (just while setting it up) and then confirm as well that it is using the network password ("#####") that we've configured for THM (e.g., don't let Windows configure if for you).

I'll be available starting this Saturday, in case Kelly would like to discuss it further.

Best regards,
Paul

Client #3: BSI has hosted a Web site, an FTP site, an e-commerce site and provided DNS and Internet access to St. Luke's House, Inc.

Beyond Systems helped to train and promote Charlie Cravath, a friend, in Web development to St. Luke's.
After years of hosting and maintaining the Web and e-commerce sites for St. Luke's, BSI transferred control to Charlie. BSI continues to provide a FTP server, email server and DNS to St. Luke's.

Hi Charlie,

I have just set up an account for you on one of my Linux servers, and placed tar-ed copies of the prod and dev versions of the SLH web site in your home directory.

You can connect as follows...

IP address of my server: 69.33.19.153

PDF created with pdfFactory trial version www.pdffactory.com

username: ccravath
password: <what we discussed on phone yesterday>

The two tar-ed archives are in /home/ccravath . In a week or two I might delete those files from your home directory (or you can), if you no longer need them, to save space.

To extract the files from the tar archive, you can type...

tar xvf dev-stlukeshouse.com.tar
and
tar xvf prod-stlukeshouse.com.tar

The prod version of the site is the latest and greatest, of course.

Good luck, and please let me know if I can help further.

Cheers,
Paul
cell: ###-###-####

P.S. Concerning DNS, when you know the IP address of the new WWW server, let me know and I will change the A record accordingly. I have the authoritative DNS server for stlukeshouse.com currently.

Also, since St. Luke's is the registrant for stlukeshouse.com, they can change to a new authoritative DNS server altogether without needing any actions from me.

To: vielep@stlukeshouse.com
From: Paul Wagner <wagner@ai.mit.edu>
Subject: e-commerce Web site for St. Luke's House
Cc: wagnerd@stlukeshouse.com

Hi Pete,

It was nice talking with you today. I was glad to hear that St. Luke's House intends to complete a preliminary Web site to accompany its donation page.

FYI, here are the transaction rates that Beyond Systems's processor charges for online payments. First, the processor checks whether the customer has a current Visa account with sufficient funds. Next, if the customer has a domestic address and supplies billing (and possibly shipping) data that Visa recognizes, then that person is designated as "qualified." If the address is foreign or not recognized, the transaction still goes through, but at the "non-qualified" rate.

So suppose, for example, that a customer surfs over to a payment Web page and pays $100 with a Visa card. Assuming she/he is qualified, then Beyond Systems will receive in its business checking account the following amount:

$100.00
- 0.32 (charged at time of transaction by processor)

99.68
- 2.282672 (2.29% of 99.68, charged by Visa)

97.40 (rounded off to nearest cent, goes to Beyond Systems)

The system handles purchases as small as 1 cent, in case you would like to test it out yourself with a credit card or check. (If you use a check, the page will ask for you a check number; that blank check is then "used up" and you should throw it away.)

PDF created with pdfFactory trial version www.pdffactory.com

Let's talk further next week, or whenever is convenient.

Cheers,
Paul

P.S. Here are the rates...

DISCOUNT FEES:
==========

Visa / Mastercard

qualified: 2.29% + 32 cents (connection fee from processor)
non-qualified: 3.54% + 32 cents (connection fee from processor)

Non-qualified includes foreign or misspelled addresses, business or check/ATM cards, etc.

electronic check

1.5% + 25 cents (connection fee from processor)

Discover

2.24% + 8 cents + 32 cents (connection fee from processor)

American Express

4.1% + 0 cents + 32 cents (connection fee from processor)

AmEx currently offers its merchants an alternative "flat fee" program:

As long as your AmEx purchases do not exceed $5000/year, you can pay $5/month and 0.0% per transaction. Once you exceed $5000 in any given year, you are automatically switched back to the "4.1% + 0 cents + 32 cents" program.

PDF created with pdfFactory trial version www.pdffactory.com

Notes:

* (Carbon) paper sales drafts help protect the merchant against chargebacks, but do not yield lower rates.

* Beyond Systems pays a merchant service fee of $52/month.

* The "connection fee" is also called an "authorization fee."

Paul ,

I just realized that your reply to my firewall message had a second part to it concerning your Mom's laptop and the virus software.

We use Norton AntiVirus here. The server contains the lasted virus definitions and when a user logs on it checks the computer and updates the virus definition if needed.

Sorry I missed the second part of the message.

John

>>> Paul Wagner <wagner@ai.mit.edu> 11/13/02 06:08PM >>>

Hi John,

Mike and I like NetMAX FireWall ProSuite. It runs on a dedicated Linux box with 2 ethernet cards. Actually, it installs and configures Linux as well as a built-in
firewall by itself.

We are running version 3.2 and older. Version 4.0 is now available, for $154.00.
See
https://www.netmax.com/order/BuyStuff.cgi/scan/st=db/co=yes/sf=category/se=NetMAX%204.0/va=banner_image=/va=banner_text=.html?id=TyBxtXom

You may have heard that Walmart sells new PCs starting around $200.
See
http://www.walmart.com/catalog/catalog.gsp?cat=86796&path=0%3A3944%3A3951%3A41937%3A86796
Many come without a floppy drive by default, and some "barebones" ones may lack memory, CPU and hard drive. Still, I think they have some good deals. For a dedicated firewall server running NetMax, you won't need an Operating System, but would need two ethernet cards.

An older machine (in case you have any lying around), with decent memory, would be fine too.

PDF created with pdfFactory trial version www.pdffactory.com

I had a question for you as well. A couple of weeks ago I noticed my mom's laptop running slowly, and traced the CPU hog to the McAfee anti-virus program. That computer has Norton anti-virus installed as well, so I shut down McAfee.

My question: Does SLH use McAfee? If so, it'd probably be best to get McAfee running properly again (so as to be consistent with everyone else at SLH), and disable Norton. On the other hand, Norton did seem to work fine as an alternative...

Thanks. Please feel free to call me with questions or suggestions.

Cheers,
Paul

One clarification, Mike had already ordered the router shipped overnight express by the time I had talked with him, (a few hours after I first left voice mail for him).

Joe

Mailbox Aliases

Changes take affect immediately!

Help

Wildcard Characters

The star (*) wildcard character matches any character string. The question mark (?) wildcard character matches any one character in a fixed position. All mail aliases are case-insensitive.

Mail Aliases

Mail aliases are used to map a mail userid to one or more mailboxes on the this mail server or internet mail addresses. In the example below, mail addressed to **Tod.Sambar@sambar.com** is redirected to the local **tod** mailbox. Typical uses for aliases include mapping *firstname.lastname* to a mail user's mailbox and/or addressing all the members of a group using a single name such as *engineering*. The **Fred.Sambar** aliase below forwards mail to the **null** mailbox. The **null** mailbox is a "special" mailbox that results in the mail quietly being discarded without the sender being notified.

Alias	Mailbox(s)
support	tod stacia
info	tod support@microsoft.com
Tod.Sambar	tod
Fred.Sambar	null

Update Configuration

Mail Fetcher Aliases

Mail *fetcher* aliases are exactly like regular mail aliases (above), except they *only apply to the fetcher*; outgoing mail is not affected by this alias. Fetcher aliases are necessary for mailing lists that come in without an identifiable user account. For example, mail received from **sambarlist@skyweb.se** is also addressed to **sambarlist@skyweb.se**, so there is no identifiable local mailbox. A **Fetcher Alias** can be used to indicate that **sambarlist@skyweb.se** should go into one or more local accounts, otherwise, it would go into the account identified by the **Unknown Mailbox**. (Note: Fetcher aliases are applied before standard aliases when retrieving mail via the fetcher.)

Exhibit 280

Alias	Mailbox(s)
sambarlist@skyweb.se	tod stacia

Update Configuration

Forward Mail

Mail "forwarding" operates much the same way as mail aliases do. The only difference is in the order of evaluation (aliases are evaluated first) and the requirement that the mailbox being forwarded exist. The "forward" entry below sends all mail destined for the mailbox **tod** to the internet address **tod@altavista.net**. Warning: If you inadvertently forward mail to an invalid mail address, all mail destined for the address will be bounced back to the client.

Mailbox	Destination(s)
tod	tod@altavista.net

MBPAdvertising, LLP admits that BSI has ISP status:

According to Google cache, recorded by Google on Jul 13, 2007 (and captured by BSI subsequently), MBP's web site, http://www.massiveresponse.com/banned.shtml, added the domain names of BSI and Hypertouch to its list of "banned" domains operated by "unacceptable E-Mail service providers." Those domain names are:

beyond-systems.com
beyondsys.net
beyondsystems.net
bihn.org
brianmangino.com
castalia.net
colorvivofilms.com
colorvivofilms.net
